

## **Mapping Instructional Materials to Your Curriculum**

Time for planning instruction is limited and educators' plates are more than full. When the scope and sequence of instructional materials are not in sync with the district curriculum, busy educators often follow the material by default, instead of following the district curriculum. This results in a disconnect between the written and taught curriculum.

Mapping instructional materials to your district curriculum empowers educators to use standards-aligned content in their instructional materials in support of the district's curriculum. This two-hour, interactive online course explains how to map citations (activities, lessons, and quizzes) in an instructional material to district curriculum units.

Participants will understand how to:

- Use the publisher's correlation to identify citations to map to the district curriculum
- Verify the alignment of those citations
- Identify which aligned citations to map to each unit of the district curriculum
- Identify gaps in instructional materials and how to fill those gaps.

A workbook will reinforce the instruction and serve as a reference after the course. Learning List will facilitate online discussion and collaboration during the course.
